Getting Started

Step 1: Access the Application

1. Open your browser and navigate to <https://FoxTradeMaster.com>
2. The dashboard will load automatically showing the current trading session
3. No login required for basic signal viewing (EUR/USD pair is free)
4. For full access to all 10 currency pairs, click "Login" and upgrade to Premium

Step 2: First Time Setup

1. Enable Audio Alerts (recommended)
Toggle the "Alerts" switch in the top-right corner
Adjust volume slider to comfortable level (default: 70%)
Test by clicking the volume icon
2. Generate Initial Signals

Click the orange "Generate Signals" button
Wait 10-30 seconds for analysis to complete
Signals will appear organized by type (BUY/SELL)

Understanding the Dashboard
Header Section

FOX TRADE MASTER - Complete User Guide

FOX Logo & Title: Brand identifier

Auto-Refresh Status: Green pulsing dot showing "Auto-refresh: ON" with timing (Fetch:

5min | Generate: 15min)

Last Updated: Timestamp showing when signals were last generated

Audio Controls: Toggle alerts on/off and adjust volume (0-100%)

Generate Signals Button: Manually refresh market analysis (orange button)

Active Trading Session Banner (Orange)

Session Name: Current active market session (e.g., "London/New York Overlap")

Description: Which currency pairs are most active

Importance: Highest volume = best trading opportunities

24-Hour Momentum Windows Section

Grid Display: Shows top 6 currency pairs with momentum analysis

ACTIVE Badge: Indicates current optimal trading window

Session Info: Which market session is driving the momentum

Direction Badge: BULLISH (green) or BEARISH (red)

Strength Dots: Visual indicator (1-10 scale)

Volatility %: Market movement intensity

Price Change %: 24-hour price movement

Optimal Time Checkmark: Best time to trade this pair

Trading Signals Section

Tabs: Filter by All Signals, BUY only, or SELL only (shows count for each)

Hide Closed Markets Toggle: Filter switch to hide signals for closed markets

Signal Cards: Detailed trading recommendations with:

Blinking Orange Dot: High-priority signals (strength 7+)

HIGH PRIORITY Badge: Pulsing orange badge for actionable signals

Market Closed Badge: Gray badge with clock icon when market is closed

Next Open Time: Shows when closed market will reopen (e.g., "Opens in 2d 1h")

Dimmed Appearance: Closed-market cards are grayed out (60% opacity)

Auto-Refresh: Fetches database every 5 min, generates fresh signals every 15 min

Trading Strategies Explained

FOX TRADE MASTER - Complete User Guide

1. Swing Trading Strategy (Timeframe: 1 hour)

What it does:

Uses MACD (Moving Average Convergence Divergence) crossovers

Confirms trend with 50-period Simple Moving Average

Best for: Holding positions for days to weeks

Signal Strength Indicators:

9/10: MACD bullish/bearish crossover confirmed + price above/below 50 SMA

(STRONGEST)

7/10: MACD approaching crossover + trend confirmation (PREPARE TO ENTER)

6/10: MACD crossover detected (MODERATE)

5/10: MACD momentum with trend bias (WATCH)

When to use:

You can hold positions for several days

You prefer fewer, higher-quality trades

Market shows clear trending behavior

2. Day Trading Strategy (Timeframe: 15 minutes)

What it does:

Uses RSI (Relative Strength Index) for overbought/oversold conditions

Combines with Bollinger Bands for entry/exit points

Best for: Intraday trading, close positions same day

Signal Strength Indicators:

9/10: RSI oversold (<30) + price at lower Bollinger Band (STRONG BUY)

9/10: RSI overbought (>70) + price at upper Bollinger Band (STRONG SELL)

6/10: RSI approaching extreme + price near bands (PREPARE)

When to use:

You can monitor trades throughout the day

You prefer quick entries and exits

Market shows range-bound behavior

3. Trend Following Strategy (Timeframe: 1 hour)

What it does:

Uses multiple EMAs (9, 21, 50) for trend alignment

Identifies strong directional moves early

Best for: Riding major market trends

Signal Strength Indicators:

10/10: All EMAs perfectly aligned (9>21>50 for bullish, reverse for bearish) - RIDE THE

FOX TRADE MASTER - Complete User Guide

TREND

6/10: EMAs approaching alignment (EARLY ENTRY OPPORTUNITY)

When to use:

Market shows strong directional movement

You want to capture large price moves

You can hold positions for hours to days

4. 24-Hour Momentum Strategy (Timeframe: 24 hours)

What it does:

Analyzes market session overlaps and volatility patterns

Identifies optimal trading windows based on time of day

Exploits session-based momentum (Asian, London, New York)

Best for: Professional timing and session-based trading

Signal Strength Indicators:

10/10: Active session overlap + strong directional momentum + optimal pair timing

8/10: Active session + high volatility + clear direction

6/10: Emerging momentum in current session

When to use:

Trading during major session overlaps (London/NY: 1-5 PM GMT)

You understand global forex market hours

You want to trade when liquidity is highest

How to Use Trading Signals

Step 1: Generate Fresh Signals

1. Click "Generate Signals" button
2. Wait for analysis (generates signals for all 10 currency pairs)
3. Review the signal count in tabs (All/BUY/SELL)

Step 2: Filter Signals

All Signals Tab: See everything at once

BUY Tab: Focus on long opportunities

SELL Tab: Focus on short opportunities

Step 3: Analyze Each Signal Card

Signal Card Components:

1. Pair Name (e.g., EUR/USD)
2. Strategy Badge (Swing/Day/Trend/Momentum)

FOX TRADE MASTER - Complete User Guide

3. Timeframe (15m/1h/24h)
4. BUY/SELL Indicator (Green up arrow or Red down arrow)
5. Strength Rating (1-10 dots)
6. Entry Price: Recommended entry point
7. Stop Loss: Where to exit if trade goes wrong (RED)
8. Take Profit: Target exit for profit (GREEN)
9. Reason: Why this signal was generated
10. Technical Indicators: Underlying data (MACD, RSI, EMAs, etc.)
11. Timestamp: When signal was generated

Step 4: Prioritize Signals

Highest Priority (Trade First):

- Strength 9-10/10
- Active momentum window with "Optimal Time" badge
- Multiple strategies agreeing (e.g., Swing + Trend both say BUY)
- During London/New York overlap session

Medium Priority:

- Strength 7-8/10
- Single strategy signal
- Outside optimal session times

Watch Only (Don't Trade Yet):

- Strength 5-6/10
- "Prepare to buy/sell" signals
- Wait for confirmation

Step 5: Execute the Trade

1. Open your trading platform (broker account)
2. Select the currency pair from the signal
3. Enter the position:
 - BUY signal Go LONG
 - SELL signal Go SHORT
4. Set your Stop Loss at the recommended level (protect capital)
5. Set your Take Profit at the recommended level (lock in gains)
6. Calculate position size based on your risk tolerance (see Risk Management)

24-Hour Momentum Windows

Understanding Trading Sessions (All times in GMT/UTC)

FOX TRADE MASTER - Complete User Guide

Asian Session (12 AM - 9 AM GMT)

Active Pairs: JPY/CNY crosses

Characteristics: Lower volatility, range-bound

Best for: Scalping and range trading

London Session (8 AM - 5 PM GMT)

Active Pairs: EUR, GBP pairs

Characteristics: High volatility, strong trends

Best for: Breakout and trend trading

New York Session (1 PM - 10 PM GMT)

Active Pairs: USD pairs

Characteristics: High volume, news-driven

Best for: News trading and momentum

London/New York Overlap (1 PM - 5 PM GMT) - BEST TIME

Active Pairs: ALL major pairs

Characteristics: HIGHEST volume and volatility

Best for: ALL strategies - this is prime trading time

How to Use Momentum Windows

1. Check Current Session (orange banner at top)
2. Review Momentum Cards for your pairs
3. Look for "ACTIVE" badges (current opportunities)
4. Match pair to session:
EUR/GBP during London session
USD/JPY during NY session
EUR/USD during overlap
5. Check Direction & Strength:
BULLISH + 8-10 strength = Strong buy opportunity
BEARISH + 8-10 strength = Strong sell opportunity
6. Verify "Optimal Time" badge before entering

Audio & Visual Alerts

Visual Alert System

The FOX TRADE MASTER uses a comprehensive visual alert system to ensure you never miss

FOX TRADE MASTER - Complete User Guide

high-priority trading opportunities.

High-Priority Signal Indicators (Strength 7-10)

1. Blinking Orange Dot

Location: Top-right corner of signal card

Appearance: Animated pulsing orange circle

Meaning: This is an actionable signal requiring immediate attention

2. HIGH PRIORITY Badge

Location: Below pair name, next to strategy badges

Appearance: Orange badge with fire emoji (🔥) and pulsing animation

Text: "HIGH PRIORITY"

Meaning: Signal strength is 7+ out of 10

3. Enhanced Card Shadow

High-priority cards have stronger shadows to stand out from regular signals

Makes them visually "pop" from the grid

4. Toast Notifications

Special "HIGH PRIORITY" message appears when strong signals are detected

Shows count of high-priority signals

Displays for 5 seconds

Example: "3 HIGH PRIORITY signals detected! (Strength 7+)"

Market Status Indicators

1. Market Closed Badge

Location: Below pair name (replaces HIGH PRIORITY when market is closed)

Appearance: Gray badge with clock icon

Text: "Market Closed"

Meaning: The market for this currency pair is currently closed

2. Next Open Time

Location: Below Market Closed badge

Format: "Opens in Xd Xh" or "Opens in Xh Xm"

Examples:

"Opens in 2d 1h" (2 days, 1 hour)

"Opens in 5h 30m" (5 hours, 30 minutes)

"Opens in 45m" (45 minutes)

3. Dimmed Card Appearance

Closed-market cards are grayed out (60% opacity)

Background has muted color (bg-muted/30)

Makes it easy to distinguish open vs. closed markets at a glance

FOX TRADE MASTER - Complete User Guide

Audio Alert System

Enabling Audio Alerts

1. Click the toggle switch next to "Alerts" (top-right corner)
2. Green = ON, Gray = OFF
3. Browser may ask for permission - click "Allow"
4. Recommended: Keep ON to catch opportunities

Adjusting Volume

1. Use the slider next to volume icon
2. Range: 0% (silent) to 100% (maximum)
3. Current volume shown as percentage (e.g., "70%")
4. Recommended: 50-70% for comfortable alerts
5. Adjust based on your environment (office vs. home)

Understanding Alert Sounds

BUY Signal Alert:

Sound: Ascending tone (C5 E5)

Character: Optimistic, rising pitch

Pattern: Double beep for emphasis

Meaning: Strong BUY opportunity detected (strength 7+)

SELL Signal Alert:

Sound: Descending tone (E5 C5)

Character: Cautionary, falling pitch

Pattern: Double beep for emphasis

Meaning: Strong SELL opportunity detected (strength 7+)

Info Alert:

Sound: Single neutral tone (D5)

Character: Informational

Pattern: Single beep

Meaning: General notification (new signals generated)

Alert Trigger Conditions

Audio alerts ONLY play for:

High-priority signals (strength 7/10)

New signals generated (not existing ones)

FOX TRADE MASTER - Complete User Guide

When audio toggle is ON

Audio alerts DO NOT play for:

Low-priority signals (strength < 7)

Signals for closed markets

When audio toggle is OFF

Alert Timing

Automatic Alerts:

Every 15 minutes when auto-refresh generates new signals

Only if new high-priority signals are found

Manual Alerts:

When you click "Generate Signals" button

Plays for each high-priority signal detected

Combined Alert Strategy

For maximum effectiveness, the FOX TRADE MASTER combines visual and audio alerts:

1. Audio alert catches your attention (even if not looking at screen)
2. Toast notification shows how many high-priority signals were found
3. Blinking orange dots guide your eyes to the important cards
4. HIGH PRIORITY badges confirm which signals to trade
5. Market status badges prevent you from trading closed markets

Example Workflow:

1. Hear ascending tone (BUY signal)
2. See toast: " 2 HIGH PRIORITY signals detected!"
3. Scan dashboard for blinking orange dots
4. Find EUR/USD with HIGH PRIORITY badge
5. Check no "Market Closed" badge present
6. Review signal details and execute trade

Auto-Refresh System

The FOX TRADE MASTER features a sophisticated dual-tier auto-refresh system that keeps your signals fresh without any manual intervention.

How Auto-Refresh Works

Two-Tier Refresh Strategy:

1. Database Fetch (Every 5 minutes)

FOX TRADE MASTER - Complete User Guide

- Checks database for any new signals
- Quick update with minimal server load
- Ensures you see signals as soon as they're generated
- No market data fetching required

2. Fresh Signal Generation (Every 15 minutes)

- Fetches live market data from Yahoo Finance
- Runs full technical analysis on all 10 currency pairs
- Generates brand new signals based on current market conditions
- Clears old signals and replaces with fresh analysis

Visual Indicators

Auto-Refresh Status (Top-Right Corner):

Green pulsing dot = System is active

Text: "Auto-refresh: ON"

Timing details: "Fetch: 5min | Generate: 15min"

Last Updated Timestamp:

Shows exact time signals were last generated

Format: "Last updated: 4:35:18 PM"

Updates every time you click "Generate Signals" or auto-refresh runs

Auto-Refresh Notifications

Toast Messages:

" Auto-refreshing market analysis..." (appears when auto-generation starts)

"Generated X new trading signals!" (appears when complete)

" X HIGH PRIORITY signals detected!" (if strong signals found)

Audio Alerts:

Plays automatically for high-priority signals (strength 7+)

Only if audio toggle is ON

Helps you catch opportunities even when not watching screen

Manual Override

You can always manually refresh signals:

1. Click the orange "Generate Signals" button
2. Triggers immediate fresh analysis
3. Doesn't affect auto-refresh schedule
4. Useful when you want to check market right now

Benefits of Auto-Refresh

FOX TRADE MASTER - Complete User Guide

Never Miss Opportunities: Signals update automatically every 15 minutes Always
Fresh Data: Market conditions change constantly, signals stay current Hands-Free
Operation: Set it and forget it - no clicking required Optimal Timing: 15-minute interval
balances freshness with API limits Quick Updates: 5-minute database checks catch
signals between generations

Best Practices

For Day Traders:

- Keep browser tab open during trading hours
- Enable audio alerts to hear new signals
- Auto-refresh ensures you catch intraday moves

For Swing Traders:

- Check dashboard 2-3 times per day
- Auto-refresh means signals are always current when you look
- Focus on high-priority signals that persist across refreshes

For All Users:

- Let auto-refresh run in background
- Don't manually refresh unless you need immediate update
- Trust the 15-minute cycle to catch market changes

Market Hours Awareness

The FOX TRADE MASTER is fully aware of global forex market hours and shows you exactly which currency pairs are tradeable at any given time.

Forex Market Hours (24/5 Operation)

Market Open:

- Sunday 10:00 PM UTC (5:00 PM EST)
- Markets open with Sydney/Asian session

Market Close:

- Friday 10:00 PM UTC (5:00 PM EST)
- Markets close after New York session

Weekend:

- Saturday: CLOSED all day
- Sunday: CLOSED until 10:00 PM UTC

Major Trading Sessions (UTC)

1. Sydney Session

- Hours: 10:00 PM - 7:00 AM UTC
- Active Currencies: AUD, NZD

FOX TRADE MASTER - Complete User Guide

Characteristics: Lower volatility, range-bound

2. Tokyo/Asian Session

Hours: 12:00 AM - 9:00 AM UTC

Active Currencies: JPY

Characteristics: Moderate volatility, technical trading

3. London Session

Hours: 8:00 AM - 5:00 PM UTC

Active Currencies: EUR, GBP, CHF

Characteristics: High volatility, strong trends

4. New York Session

Hours: 1:00 PM - 10:00 PM UTC

Active Currencies: USD, CAD

Characteristics: High volume, news-driven

5. London/New York Overlap

Hours: 1:00 PM - 5:00 PM UTC (4 hours)

Active Currencies: ALL major pairs

Characteristics: HIGHEST volume and volatility

This is the BEST time to trade!

Market Status Indicators

On Signal Cards

1. Market Closed Badge

Appears when the market for that pair is closed

Gray badge with clock icon

Text: "Market Closed"

Replaces HIGH PRIORITY badge

2. Next Open Time

Shows when market will reopen

Examples:

"Opens in 2d 1h" (Weekend closure)

"Opens in 5h 30m" (Between sessions)

"Opens in 45m" (About to open)

3. Dimmed Appearance

Closed-market cards are grayed out (60% opacity)

Background is muted

Easy to see which signals are NOT tradeable right now

Hide Closed Markets Toggle

FOX TRADE MASTER - Complete User Guide

Location: Top-right of Trading Signals section, next to tabs

How to Use:

1. Toggle switch labeled "Hide Closed Markets"
2. When ON: Closed-market signals are completely hidden
3. When OFF: All signals shown (closed markets dimmed)

When to Use:

Toggle ON when you want to focus only on tradeable opportunities

Toggle OFF when you want to see all signals and plan ahead for market opens

Per-Pair Market Status

The system tracks market hours for each currency individually:

EUR/USD Example:

EUR market (London): 8:00 AM - 5:00 PM UTC

USD market (New York): 1:00 PM - 10:00 PM UTC

Tradeable when: Either EUR OR USD market is open

Best time: 1:00 PM - 5:00 PM UTC (overlap)

USD/JPY Example:

USD market: 1:00 PM - 10:00 PM UTC

JPY market: 12:00 AM - 9:00 AM UTC

Tradeable when: Either USD OR JPY market is open

Best time: 1:00 PM - 9:00 PM UTC (both open)

Weekend Detection

Saturday (All Day):

All signals show "Market Closed"

Next open time: "Opens in 1d Xh" (Sunday evening)

Forex markets are completely closed

Sunday (Before 10:00 PM UTC):

All signals show "Market Closed"

Next open time: "Opens in Xh Xm" (countdown to 10 PM)

Markets about to open

Sunday (After 10:00 PM UTC):

Markets are OPEN

Sydney/Asian session begins

JPY, AUD, NZD pairs become tradeable

Using Market Hours Strategically

Best Trading Times (Ranked)

1. London/New York Overlap (1-5 PM UTC)

FOX TRADE MASTER - Complete User Guide

Highest volume and liquidity

Tightest spreads

Best for ALL strategies

Trade: EUR/USD, GBP/USD, USD/JPY, EUR/GBP

2. London Session (8 AM - 1 PM UTC)

High volatility

Strong trends

Good for breakout and trend trading

Trade: EUR/USD, GBP/USD, EUR/GBP

3. New York Session (5-10 PM UTC)

High volume

News-driven moves

Good for momentum trading

Trade: USD/JPY, USD/CNY, EUR/USD

4. Asian Session (12 AM - 8 AM UTC)

Lower volatility

Range-bound

Good for scalping and range trading

Trade: USD/JPY, JPY/CNY, EUR/JPY

5. Between Sessions (9-12 AM UTC, 10 PM - 12 AM UTC)

Lowest volume

Widest spreads

Avoid unless you're an expert

Wait for next session

Session-Based Strategy Selection

During London/NY Overlap:

Use ALL strategies

Focus on high-priority signals (7+)

Trade major pairs (EUR/USD, GBP/USD)

During Asian Session:

Use Day Trading strategy (RSI + Bollinger)

Focus on JPY pairs

Smaller position sizes (lower volatility)

During London Session:

Use Swing and Trend Following strategies

Focus on EUR and GBP pairs

Ride the strong European trends

During New York Session:

FOX TRADE MASTER - Complete User Guide

Use Momentum strategy
Focus on USD pairs
Watch for news events

Market Hours Best Practices

DO:

Check market status before trading
Use "Hide Closed Markets" toggle to focus
Trade during session overlaps for best liquidity
Plan trades ahead for market opens
Note next open time for closed markets

DON'T:

Trade signals for closed markets
Ignore the dimmed/grayed cards
Trade during low-volume periods (between sessions)
Forget about weekend closures
Assume all pairs are always tradeable

Troubleshooting Market Hours

"All signals show Market Closed"
Check if it's Saturday (all day closed)
Check if it's Sunday before 10 PM UTC
Check if it's Friday after 10 PM UTC
Forex markets are closed on weekends
"EUR/USD shows closed but it's Tuesday"
Check current UTC time
London: 8 AM - 5 PM UTC
New York: 1 PM - 10 PM UTC
If outside these hours, both markets are closed
"Next open time seems wrong"
System uses UTC time
Convert to your local timezone
Check if daylight saving time affects your region
"Hide Closed Markets hides everything"
All markets are currently closed (weekend or off-hours)
Toggle OFF to see all signals

FOX TRADE MASTER - Complete User Guide

Plan trades for when markets reopen

Best Practices

Daily Trading Routine

Morning (Before Trading)

1. Open FOX TRADE MASTER 30 minutes before your trading session
2. Verify auto-refresh is ON (green pulsing dot in header)
3. Enable audio alerts (toggle ON, set volume 50-70%)
4. Check which markets are open (look for "Market Closed" badges)
5. Toggle "Hide Closed Markets" ON to focus on tradeable pairs only
6. Check current trading session (orange banner shows active session)
7. Review momentum windows for your preferred pairs
8. Identify high-priority signals (look for blinking orange dots and badges)

During Trading Session

1. Let auto-refresh run (generates fresh signals every 15 minutes automatically)
2. Listen for audio alerts (ascending tone = BUY, descending = SELL)
3. Watch for toast notifications (" X HIGH PRIORITY signals detected!")
4. Check blinking orange dots when you hear alerts
5. Verify no "Market Closed" badge before executing trades
6. Focus on strength 8-10 signals during active sessions (especially London/NY overlap)
7. Cross-reference multiple strategies (if Swing + Trend agree = stronger signal)
8. Trade during session overlaps for best liquidity and tightest spreads

End of Day

1. Review closed positions vs. signal recommendations
2. Check "Last Updated" timestamp to see when signals were last refreshed
3. Note which strategies worked best for your style and session
4. Check if you traded during optimal windows (momentum windows with " Optimal Time")
5. Review next open times for closed markets to plan ahead
6. Plan tomorrow's session based on momentum analysis and market hours

Signal Selection Strategy

Conservative Approach (Lower Risk):

FOX TRADE MASTER - Complete User Guide

Only trade strength 9-10/10 signals

Only during London/NY overlap

Only when momentum window shows "Optimal Time"

Wait for multiple strategies to agree

Use smaller position sizes

Moderate Approach (Balanced):

Trade strength 7-10/10 signals

Trade during any major session (not just overlap)

Consider momentum windows but not required

Take signals from any strategy

Standard position sizing

Aggressive Approach (Higher Risk):

Trade strength 5-10/10 signals

Trade any time (including off-session)

Use "prepare to buy/sell" signals as early entries

Take all strategies

Larger position sizes (still within risk limits)

Multi-Strategy Confirmation

Strongest Signals (Highest Probability):

Swing + Trend both say BUY/SELL

Day + Momentum both say BUY/SELL

All 3-4 strategies agree on direction

How to spot:

1. Generate signals
2. Look for same pair appearing multiple times
3. Check if all cards show same direction (all BUY or all SELL)
4. These are your BEST opportunities

Risk Management

Position Sizing Formula

Never risk more than 1-2% of your account per trade

Plain Text

Position Size = (Account Balance × Risk %) / (Entry Price - Stop Loss)

Example:

- Account: \$10,000

FOX TRADE MASTER - Complete User Guide

- Risk: 1% = \$100
 - Entry: 1.1000
 - Stop Loss: 1.0950
 - Difference: 0.0050 (50 pips)
- Position Size = $\$100 / 0.0050 = \$20,000$ notional (0.2 lots)

Using Stop Loss & Take Profit

Stop Loss (Mandatory):

- ALWAYS use the recommended stop loss
- Never move stop loss further away from entry
- Can move stop loss to breakeven after profit
- Protects you from catastrophic losses

Take Profit (Recommended):

- Use recommended TP for full automation
- Alternative: Close 50% at TP, let 50% run with trailing stop
- For strength 9-10 signals, consider holding past TP if trend continues

Risk Levels by Signal Strength

Signal Strength	Risk Per Trade	Position Size
9-10/10	1.5-2%	Standard-Large
7-8/10	1%	Standard
5-6/10	0.5%	Small

Daily Loss Limits

Stop trading for the day if:

- You lose 3% of account balance
- You have 3 consecutive losing trades
- You're trading emotionally (revenge trading)

Weekly Loss Limit:

- Stop trading for the week if down 5%
- Review what went wrong
- Come back fresh next week

FOX TRADE MASTER - Complete User Guide

Advanced Tips

1. Session-Based Trading

Asian Session: Trade JPY pairs with Day Trading strategy (range-bound)

London Session: Trade EUR/GBP with Swing/Trend strategies (trending)

NY Session: Trade USD pairs with all strategies

Overlap: Trade everything with Momentum strategy

2. News Awareness

Check economic calendar before trading

Avoid trading 15 min before/after major news (NFP, FOMC, CPI)

Or use Day Trading strategy for quick in-and-out around news

3. Correlation Trading

EUR/USD and GBP/USD usually move together

If both show BUY signals = stronger confirmation

If they diverge = wait for clarity

4. Timeframe Alignment

Swing (1h) + Trend (1h) = Same timeframe = Stronger signal

Day (15m) = Different timeframe = Use for quick scalps

5. Momentum Window Exploitation

Set alerts for session changes (8 AM, 1 PM, 10 PM GMT)

Generate new signals at session start

First 30 min of overlap = highest volatility = best opportunities

Common Mistakes to Avoid

DON'T:

1. Ignore stop losses - This will blow your account
2. Trade every signal - Quality over quantity
3. Overtrade during low-strength signals (5-6/10)
4. Trade outside your session (if you're a day trader, don't hold overnight)
5. Increase position size after losses (revenge trading)

FOX TRADE MASTER - Complete User Guide

6. Disable audio alerts (you'll miss opportunities)
7. Trade without checking momentum windows (timing is everything)
8. Mix strategies randomly (stick to your plan)

DO:

1. Use stop losses religiously
2. Focus on strength 8-10 signals
3. Trade during optimal sessions
4. Keep a trading journal (track which strategies work for you)
5. Start small (0.5% risk until profitable)
6. Follow the momentum windows
7. Wait for multi-strategy confirmation on big trades
8. Take breaks between trades (avoid overtrading)

Troubleshooting

No Signals Generated

Cause: Market conditions don't meet strategy criteria Solution:

Wait 15-30 minutes and regenerate

Check if it's a major holiday (markets closed)

Try during London/NY overlap for more activity

Audio Alerts Not Working

Cause: Browser permissions or volume settings Solution:

Check browser allows sound

Verify toggle is ON (green)

Increase volume slider

Test with a manual signal generation

Signals Seem Wrong

Cause: Market volatility or news events Solution:

Check economic calendar for major news

Wait for market to settle after news

Focus on higher strength signals (9-10)

Use multiple strategy confirmation

FOX TRADE MASTER - Complete User Guide

Too Many Signals

Cause: High market volatility Solution:

Filter by strength (only 8-10)

Focus on one strategy at a time

Use BUY or SELL tabs to reduce clutter

Trade only during your preferred session

Quick Reference Card

Signal Strength Guide

10/10: STRONGEST - Trade immediately with full size

9/10: STRONG - High confidence trade

8/10: GOOD - Solid opportunity

7/10: DECENT - Trade with caution

6/10: MODERATE - Small size only

5/10: WATCH - Don't trade, monitor

Best Trading Times (GMT)

8:00-9:00: Asian/London overlap (1 hour)

13:00-17:00: London/NY overlap (4 hours)

Avoid: 22:00-00:00 (low liquidity)

BEST

Strategy Quick Pick

Trending Market: Use Trend Following (EMA alignment)

Range-Bound Market: Use Day Trading (RSI + Bollinger)

Unclear Market: Use Swing Trading (MACD crossover)

Session Start: Use 24-Hour Momentum (session analysis)

Success Checklist

Before every trade, verify:

Signal strength 7/10

Stop loss is set

Position size follows risk rules (1-2% max)

Trading during active session

Momentum window supports the direction

No major news in next 30 minutes

Audio alerts are enabled

FOX TRADE MASTER - Complete User Guide

You understand the strategy reason

Support & Updates

Auto-Refresh

Signals refresh every 5 minutes automatically

Manual refresh: Click "Generate Signals" button

Momentum windows update in real-time

Data Sources

Live forex data from Yahoo Finance

10 currency pairs monitored

Multiple timeframes (15m, 1h, 24h)

Customer Support
